

This open data hosts the probabilistic atlas of human SIPS from 94 subjects collected by Human Connectome Project (HCP) in MNI152 space.

SIPS_MNI152_probabilistic.nii.gz: probabilistic atlas of SIPS. The number in the data aligned in MNI152 space indicates a number of subjects who has SPIS streamline within that coordinate.

Original neuroimaging data used to create this atlas were in part provided by the Human Connectome Project, WU-Minn Consortium (Principal Investigators: David Van Essen and Kamil Ugurbil; 1U54MH091657) funded by the 16 NIH Institutes and Centers that support the NIH Blueprint for Neuroscience Research; and by the McDonnell Center for Systems Neuroscience at Washington University. Original neuroimaging data was also provided by MGH-USC Consortium of the Human Connectome Project (Principal Investigators, Bruce Rosen, M.D., Ph.D., Arthur W. Toga, Ph.D., Van J. Wedeen, M.D.), which was funded by the National Institute of Dental and Craniofacial Research (NIDCR), the National Institute of Mental Health (NIMH), and the National Institute of Neurological Disorders and Stroke (NINDS) and disseminated by the Laboratory of NeuroImaging at the University of Southern California. The study was performed under the HCP's Open Access Data Use Terms.
